CLINICAL TRIAL ALERT · TARDIVE DYSKINESIA

STILL

twitching on a VMAT2?

A new trial wants your patient.

Fady Boules, PMHNP-BC

Your patient is on valbenazine or deutetrabenazine.

And they're still moving.

You know the look. Lip smacking. Tongue rolling. Finger picking.

> This trial was built for that exact patient.

The unmet need is real. The trial is open. The patient is in your panel right now.

TD4027 at a glance

24

Weeks Open-Label

Full open-label treatment period

1

Pill Daily

Valbenazine — once daily dosing

8+

US Sites Recruiting

Active enrollment nationwide

18+

Adult Age Minimum

Eligible adult patients only

Sponsor: Neurocrine · NCT07105111

OLD KINECT TRIALS

VMAT2-naïve patients only.

Designed for those who had never tried a VMAT2 inhibitor before.

TD4027

Already tried a VMAT2. Still has TD.

👈 **THIS is the unmet need.**

Recruit if your patient…

✓ Is 18 or older

Adult patients meet the age threshold for enrollment.

✓ Has schizophrenia, schizoaffective, bipolar, or MDD (≥3 months)

Qualifying psychiatric diagnoses with documented duration.

✓ Has at least mild TD (≥3 months)

Confirmed tardive dyskinesia of at least mild severity, present for three or more months.

✓ Is on — or recently stopped — a VMAT2 inhibitor and still has symptoms

Current or recent VMAT2 exposure with persistent TD symptoms.

The last one is the whole point.

STOP

exclude if…

× Parkinsonism more prominent than TD

Movement disorder profile must be TD-dominant, not parkinsonian.

× Moderate/severe substance use in the last 6 months

Active or recent significant substance use disorder is exclusionary.

× Long QT, arrhythmia, or severe hepatic impairment

Cardiac and hepatic safety criteria must be met for enrollment.

"Not every patient responds to their first VMAT2 inhibitor."

TD4027 is the first trial to formally study what happens next.

Primary endpoint: AIMS score change at Week 24.
Secondary: CGI-TD-S, TDIS, EQ-VAS.

Your 3-step recruit move

1 2 3

1 — SCREEN

Every psych patient on a VMAT2. AIMS in under 5 minutes.

2 — FLAG

Still symptomatic? They're a TD4027 candidate.

3 — REFER

909-955-5865

Save this. Screen one patient this week.

The patient still twitching on their current VMAT2? That's the one.

💬 Comment "TD4027" and I'll DM the trial link.
